

TREETINO

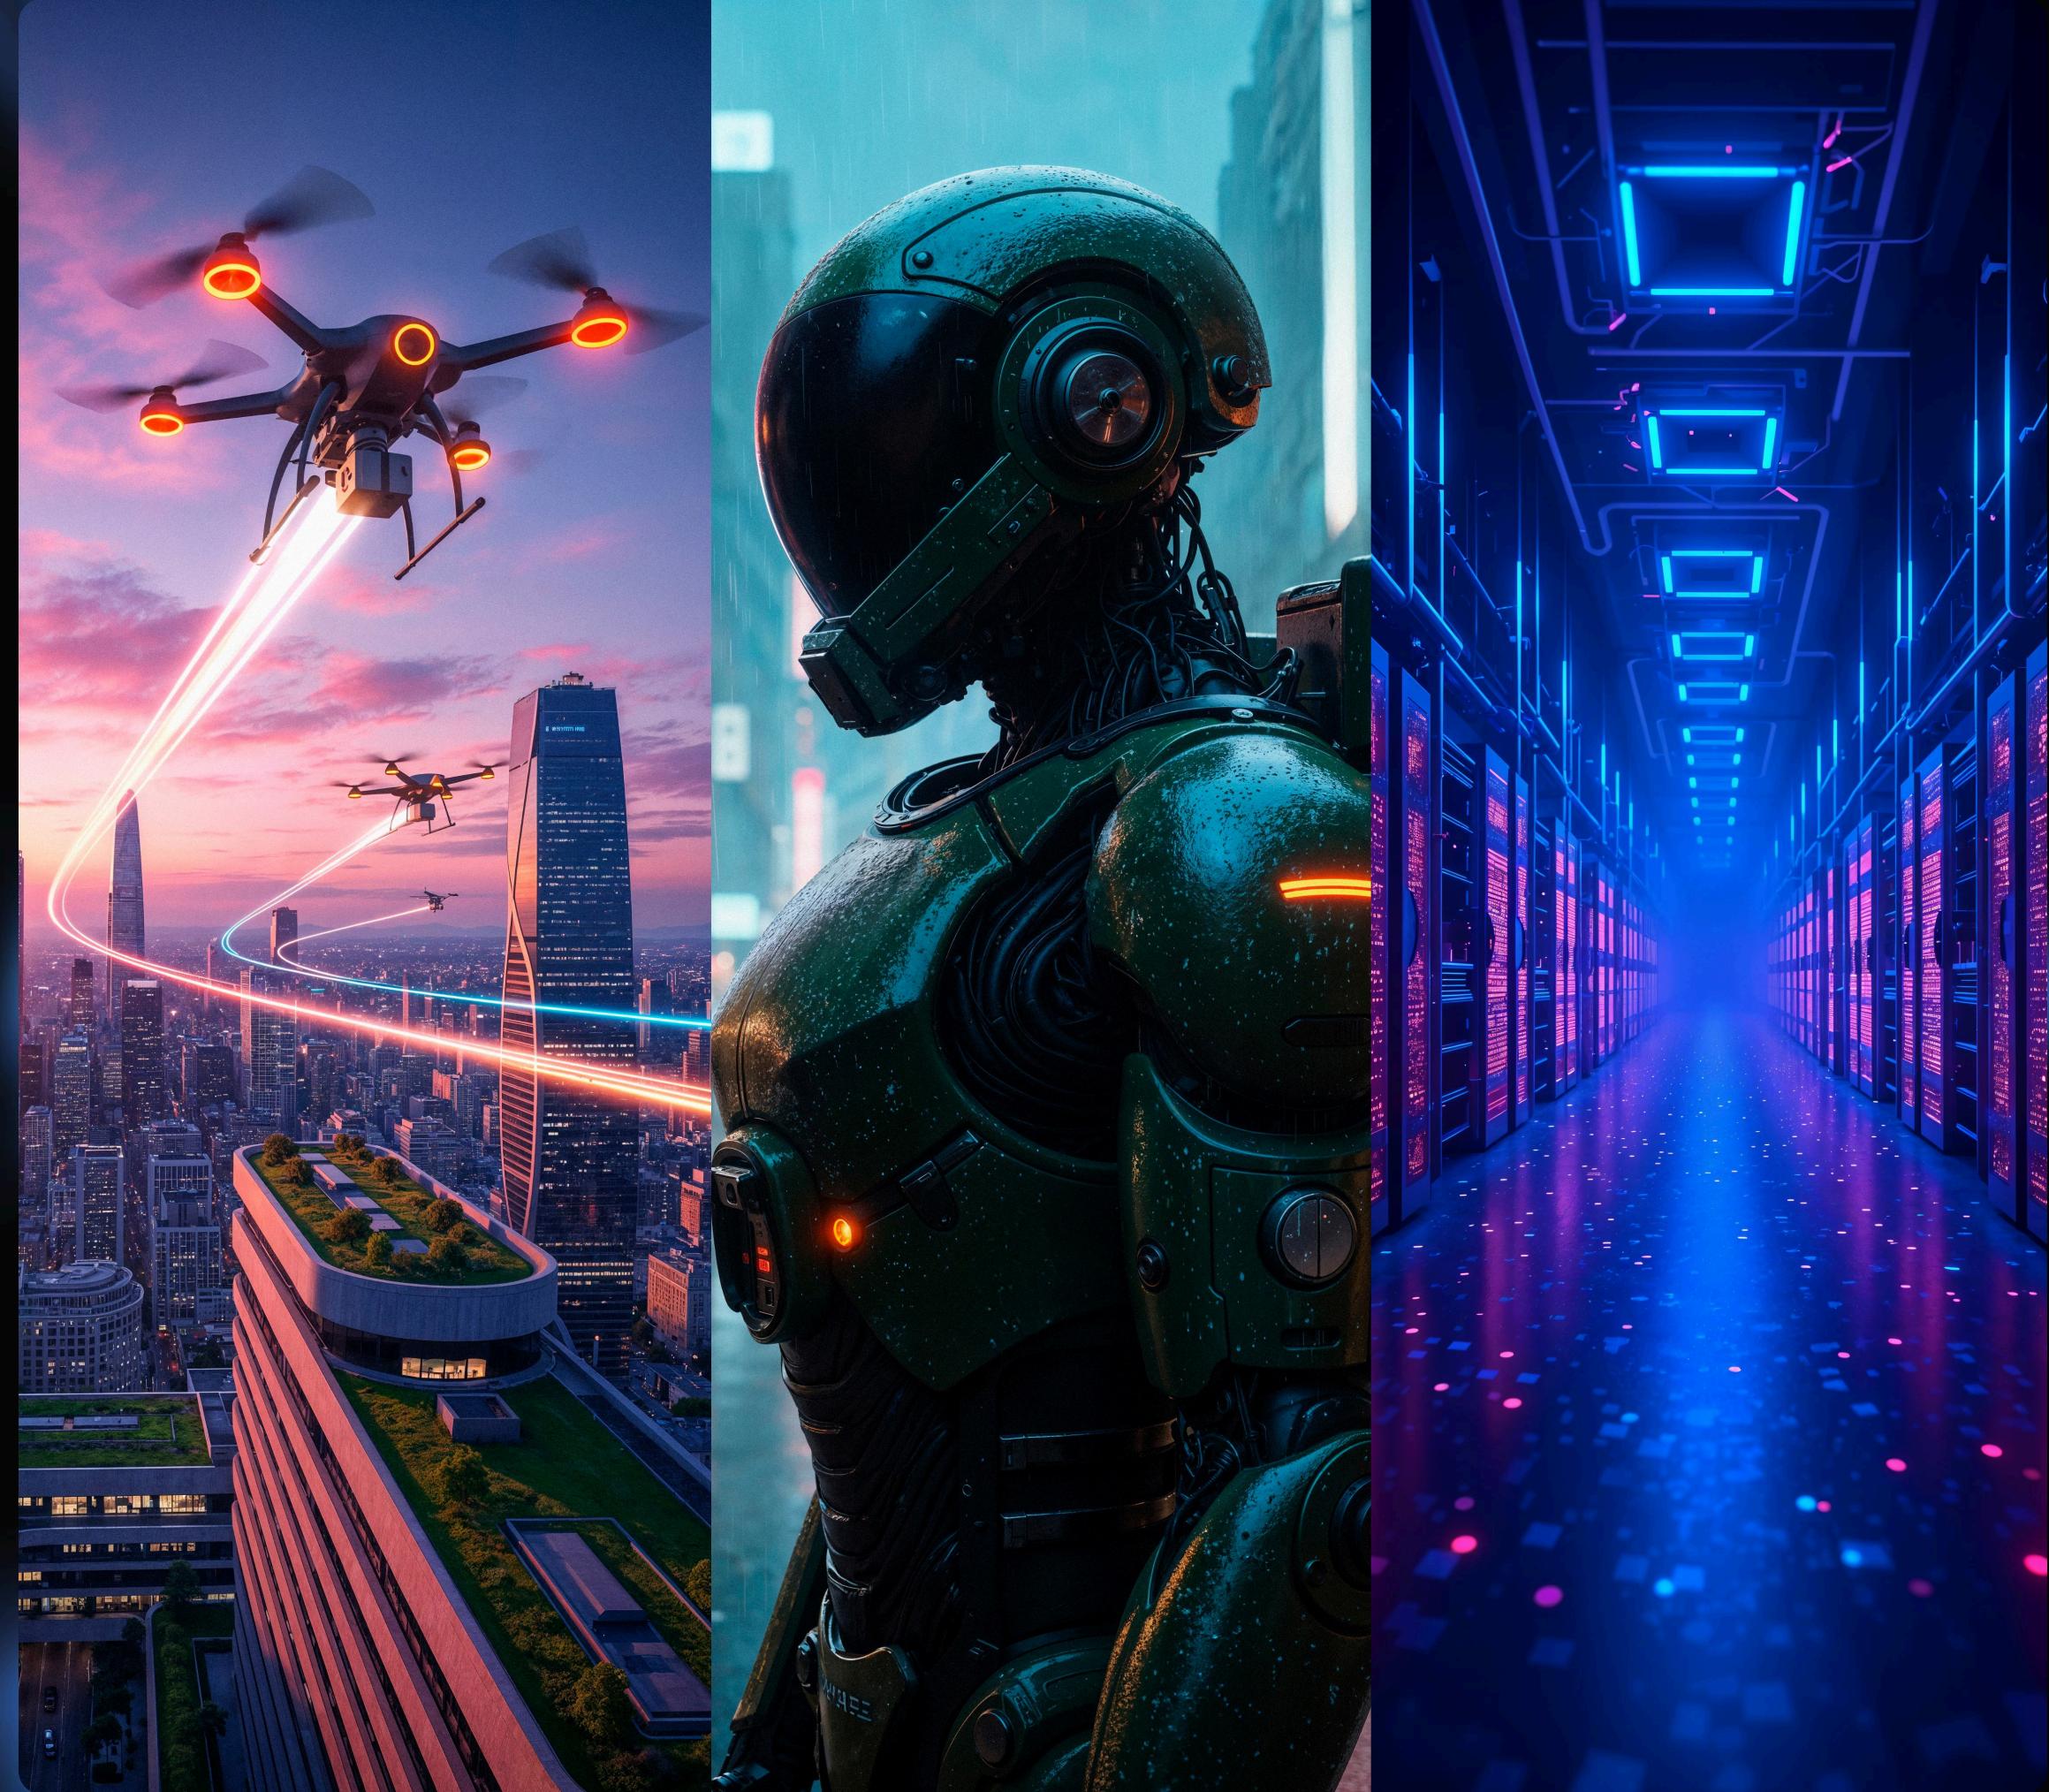

**The Future of Energy
Rooted in Sustainability**

www.treetino.eu

The Growing Energy Demands

In 2025, the global energy market grew by \$300B, \$230B of which in renewables alone.

We saw all of this madness and our positioning with Treetino in it is pretty straight-forward.

WE SAY THAT

In a Gold Rush, Sell Shovels

Our Solution

Treetino transforms underutilized urban space with high-yield energy futuristic 'trees'.

To get the full picture read these **6 main numbers**.

300 is the number of solar leaves we have equipped with state of the art AI-sun-tracking software to increase the **efficiency by up to 32%**.

12 transparent wind turbines specifically designed for urban environments to be extremely efficient at lower wind speeds, silently producing energy even throughout the night.

49kw in power is a number specifically picked to fit European legislation powering up **60 modern households**.

400 meters squared is the space we save compared to traditional solar, fitting the equivalent of 2 tennis courts on a footprint so small you don't even need a building permit.

Numbers

300 leaves

12 turbines

49kW power

400M² saved

1M² footprint

60 houses

Our Traction

We are already funded by the government.

Our soft-committed VCs have pushed us to develop a smaller version that is directly slotting into an existing market.

To put simply, we are building a killer product that has at least 3x better cost to energy production ratio compared to our closest competitor.

Timeline

We have multiple clients lined up. Most prominently two of the major Czech banks fighting over who will get the first delivery.

One of them is currently offering an investment and the other is actively accelerating us.

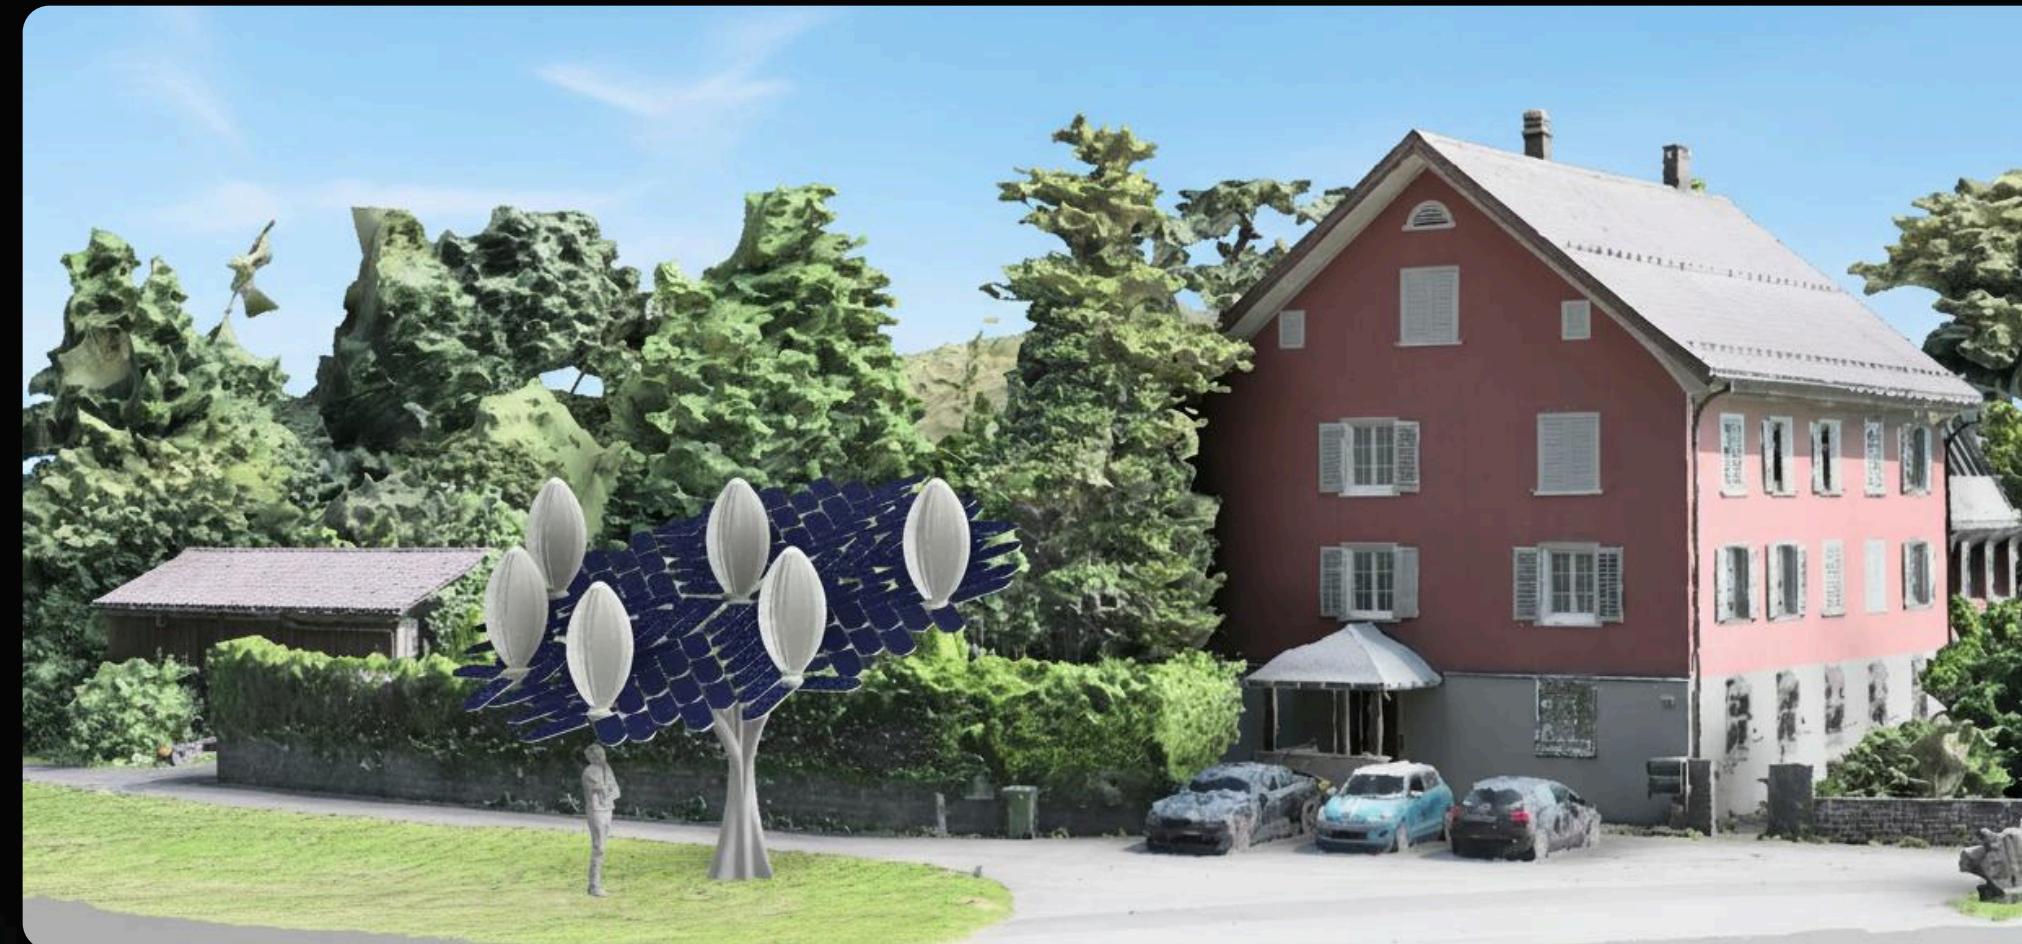

- **2021**
Incorporation
- **2022**
Bootstraping
- **Q2 2025**
Grant approval, incubations and accelerations
- **Q1 2026**
First 2 prototypes scheduled for delivery
- **Q2 2026**
Delivery to Moldova
- **Vision 2027**
Urban mobility economy focus

RWA Energy with Future of Urban Mobility

Our product is a modular, high-margin, renewable energy unit—a true, recession-proof commodity that produces at least 7% annual yield.

To paint the big vision, we are not just selling hardware, we are tokenizing the energy market as a whole, one RWA unit at a time.

We're Building The Future of Energy, Rooted in Sustainability
